More efficient than a conventional vane grinder motor, the 2 stage turbine motor in the GTG25 provides an extremely high efficiency leading to great rate of material removal. When it comes to power, performance and operator comfort, the GTG25 is in a class of its own.

Features & benefits

- Great power to weight
- 2.5 kW spindle power
- Energy efficient turbine motor - 2,5 kW at 32 l/s
- Speed governor for optimal performance
- Auto Balancer for reduced vibrations
- Low noise
- Overspeed shut-off for increased safety
- Spindle lock and adjustable wheelguard
- Modular internal components - Easy to service

Technical data

 Units: [Metric](#) [Imperial](#)

| Technical Specifications | |
|-------------------------------|----------------------|
| Model type | Angle |
| Motor type | Turbine |
| Max Free Speed | 8500 r/min |
| Min free speed | 7300 r/min |
| Max wheel dia | 180 mm |
| Max output | 2.5 kW |
| Weight | 2.2 kg |
| Height over spindle | 61 mm |
| Air consumption at max output | 34 l/s |
| Air consumption at free speed | 9 l/s |
| Rec hose size | 16 mm |
| Sound standard | ISO15744 |
| Sound pressure | 77 dB(A) |
| Sound uncertainty | 3 dB(A) |
| Vibration standard | ISO28927-1 |
| Vibration value | 3.1 m/s ² |

| | |
|-----------------------|----------------------|
| Vibration uncertainty | 1.3 m/s ² |
| Max working pressure | 7 bar |

Included accessories with this product

Allen key
6 mm
4080 0048 00

Allen key
5 mm
0902 0113 00

Flange washer compl.
Ø 41mm. Applicable for grinding
wheel
4175 0777 90

Flange washer compl.
Ø 58 mm. Applicable for cutting-off
wheel
4175 0777 92

Whip hose kit
3/8" + RUBAIR16
4175 0738 90

Spare parts lists, Dimensional drawings, Exploded Views, Service Instructions, etc.

Below you find links to Atlas Copco ServAid application, where you find spare parts list and product instructions and a link to the Dimensional Drawing archive where you can find 2D and 3D drawings in PDF, DXF and IGS format.

Atlas Copco Service

The Leader in tool maintenance for industry Atlas Copco service is a proven cost-saver in your production. The savings you can expect from running a service program depend on the type of production you have in your plant. Many factors are taken into consideration, including: Line assembly, work at fixed stations, frequency of tool use, tool types, applications, and work environment.

Repair Service

With today's high demands on minimizing downtime for our customers, we focus on specialized workshops that can handle quick repairs and complete overhauls in the most cost-efficient way. To do that we keep a large inventory of spare parts in stock, and we have upgraded with factory fixtures and test equipment to increase our efficiency. With all this, plus certified mechanics dedicated to specific tool models, we've minimized lead times and improved the quality of each repair. After service all tools are rigorously tested to Atlas Copco specifications.

Atlas Copco ToolScan

Atlas Copco ToolScan™ report informs you of the status of your air tools and air supply at each workstation. The service is carried out by a highly experienced certified technician and covers the following areas: A report informing you of the status of your air supply and tools, including recommendations for improvements.

AirScan of the air supply at each workstation.

Status and performance check of the tools

Other services can be added.

You can then, together with your team, decide the next step without a binding agreement.

Energy Efficiency Audit

A huge amount of energy is wasted due to leaks in compressed air systems. Capacity losses of up to 20% are common in many installations. During an Energy Efficiency Audit Atlas Copco checks the static and dynamic pressure for your air tools on the line. The pressure drop is measured and documented and a visual inspection of the air installation is performed. Based on the information acquired, using the Energy Efficiency Calculator, Atlas Copco recommends the correct installation in terms of air line accessories and various other aspects.

Preventive Maintenance

Like other machines, Atlas Copco industrial power tools need regular maintenance in order to fulfill their full potential in terms of performance and reliability. Different agreements are available, tailored to your needs. We offer maintenance both on-site or off-site, or a combination.

Full Coverage Service

Our Full Coverage option keeps your power tools in top operating condition and gives you a fixed budget for all tool maintenance. Other services can be added. To develop the optimum service program for your specific manufacturing operation, take advantage of our unique ToolScan RCM process.

Full Coverage includes:

- Repair, including parts
- Calibration
- Preventive maintenance program
- On-site/off-site options
- Other services can be added

Outsourcing solutions

We have extensive experience of outsourcing solutions and currently have more than 75 on-site workshops. These are examples of the areas we cover: [Read](#)

- Preventive maintenance, repair and calibration of all brands and types of tools.
- Installation and start-up support.
- Service management system, including developing Key Performance Indicators.
- Line and process support.
- Back-up tool/equipment and spare parts management.
- Other customer requests.

Safety Information

To operate tools safely, always read and follow all Safety Information and Product Instructions. All locally legislated safety rules regarding installation, operation and maintenance must be respected at all times.

[Product Instructions](#)

Eco Design and environmental aspects of product development is nothing new to us. Atlas Copco has a history of developing modular tools with a deep respect for materials and natural resources used in the products. We always strive to maximize the functionality of the product and at the same time minimize the energy consumption to make sure the environmental impact is as low as possible. By developing accurate tools we make sure the customer never has to waste time or energy to re-do an operation. For battery tools we also have the option to connect multiple tools to one controller and thereby decrease the standby energy consumption considerably.

Eco Design is all about minimizing a product's environmental impact during its entire life-cycle, including extraction of raw materials, manufacturing, customer usage and recycling while maximizing the productivity.

Our approach to Eco Design

Within Industrial Technique we approach Eco Design from six different areas. These form the core of the Eco Design review performed in each product development project. This procedure helps define Eco Design targets early in the project.

- 1. HAZARDOUS SUBSTANCES**
We avoid hazardous substances and materials listed on the Atlas Copco Restricted & Prohibited list.
- 2. MATERIALS**
We use materials and structural features to minimize the product's weight and invest in strong, durable materials to protect the product.
- 3. MIX AND MODULARITY**
We avoid mixing materials since blends inhibit recycling and consider fastening methods to facilitate disassembly.
- 4. ENERGY**
We consider how the final product will be used in order to minimize energy and resource consumption in the use phase, in production and during transportation.
- 5. REUSE AND RECYCLING**
We design with recycling in mind. We promote repair and upgrading, especially for long lasting and system-dependent products. To increase the customer's awareness regarding the importance of recycling, we are now including Recycling Instructions in the Product Information (PI).
- 6. INFORMATION CUSTOMER**
We prepare for upgrading, maintenance and recycling, through labelling, modularization and information in the product information.

This is how we do Sustainable Productivity in practice!
